Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

This main house on this property is an example of the Queen Anne style and was likely constructed in the late 19th century. It retains many elements of its original design including patterned wood shingles, an octagonal tower, cross-gables and extensive porches. The barn associated with this property was likely constructed in the late 19th century. It is a relatively common type of construction. It has a side-gambrel roof with a square tower centered on the roof peak. This property is potentially eligible under Criteria A for its association with agriculture and also under Criteria C as an excellent example of the Queen Anne style of architecture. An earlier survey noted that prominent local craftsman John B. Bailey designed and constructed this Victorian Farmstead.

Noteworthy for combining Queen Anne elements with traditional vernacular house form. Pk.

SUMMARY

HA-1569

Edward L. Wilkinson Farm
3747 Rock Run Road
vicinity of Level

The Village of Level, known earlier as Hopewell Crossroads, has quite a few historic buildings in it. Perhaps the most stylish of these is the house on the south west corner of the intersection of Rock Run and Rt. 161. 75-85 years ago John B. Bailey (carpenter-cabinet maker and undertaker) remodeled an existing dwelling to make it a most fashionable Victorian residence. What is actually a modest size house seems large and complex because of its four porches and splendid tower. Tall windows, brackets and spindles, fishscale shingles and a cross gable exist in such an arrangement as to give the house a character all of its own.

This is one of the buildings in this neighborhood which exhibits the skills and sense of design by the local craftsman John B. Bailey. The late Victorian farm is made complete by a gambrel roofed board and batten barn that is also decoratively shingled.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

This farm is located on both sides of Rt. 161 where it crosses the Rock Run Road. It occupies a prominent position in what was once Hopewell Crossroads.

The dwelling is a two story frame house decorated with many late Victorian features. The massing consist of a three bay wide two deep main block on a stone foundation with two story projections to both the south and west. The main block has a cross gable facade that faces east while the south wing appears to be an addition (probably added at time of Victorian renovation) it like the rest of the building is covered with German siding.

Both sections are covered with a gable-end slate roof with imitation exposed rafters. The east facade is the entrance side. It is characterized by the cross gable and the full porch on the first story. The fenestration is regular consisting of 2/2 sash with a side entrance in the south bay. The door is of the double raised arch (italianate) type and their are sidelights with a transom. The porch is supported by three chamfered columns and rest on stone piers. The cross gable is vented by a round arch window with a pair of casement panes.

Perhaps the most distinctive feature of this building is the polyzinal tower on the north east corner. Its first story is a 7 bay lighting device for the parlour. Large 2/4 sash allow for a lot of natural light for at least half of the day. The upper portion of the tower contains a sleeping porch made decorative by turned spindles brackets and fishscale shingles. The turret is finished by a shingled cap with pinnacle.

There is a one bay 2-story extension to the west off of the main block. It is curious that this wing has 6/6 sash in the east and 2/2 in the west. It has the same siding, roof, corner mouldings etc. as the rest of the building. Tall 1/1 lights on the southeast corner of the main block are in deference to the south extension. It is likely that it dates from the Bailey renovation. There is an enclosed shed roofed porch that runs along the south end of this wing.

The north side of the house is almost as fancy as the east. It too has a two story polyzinal projection. A three bay 2/2 lights the downstairs and a bracketed overhang provides another sleeping porch above. Its roof is supported by turned columns.

The north end of the main block has the same 2/2 windows as elsewhere in the house and yet another porch. It is a single story two bay porch with chamfered columns supporting a shed roof. The tongue-and-groove floor rests on stone piers and lattice work once covered the cavity.

BARN

Most of the gambrel roofed barns in Harford County appear to be post World War I barns if not post World War II. This barn is an exception, however, and by virtue of its shingles, cut nails and post--and-beam construction is believed to be of the same vintage as the Victorianized dwelling.

The Maryland Historic Sites Inventory was officially created by an Act of the Maryland Legislature, to be found in the Annotated Code of Maryland, Article 41, Section 181 KA, 1974 Supplement.

The Survey and Inventory are being prepared for information and record purposes only and do not constitute any infringement of individual property rights.

RETURN TO: Maryland Historical Trust
The Shaw House, 21 State Circle
Annapolis, Maryland 21401
(301) 267-1438

It is a three bay barn 40'4" long and 30'2" deep in the exterior. It is a post-and-beam structure although the members are circular sawn not hewn. Its exterior is covered with board-and-batten on the first level with wooden shingles in the upper ends of the gambrel roof. The battens are particularly fancy being an ovolo shape as opposed to the more common squared or beveled batten.

These battens are fixed with cut nails.

The metal roof is probably fairly recent, nailers suggest original roof had wood shingles. The doors read as replacements being batten doors made of vertical tongue-and-groove with wire nails. They have very clever hand made horseshoe latches.

The interior consists of a first level with a central passage and stall areas on either side. Feed troughs separate the three areas. Above this byre is the mow.

The framing consists of thick 7-1/2" posts with braces and plates and sills being mortised and trunneled. The plates are not continuous but scarfed. The 2" X 6" rafters contain a mixture of vertical and circular sawn stuff. There are four posts to the side walls. The two inner posts have 1" metal tension rods running down and connecting them to the joists. These rods probably take the place of the absent - the beams which we would expect in a post-and-beam building.

Air is provided by a centrally located 3 1/2' square louvered cupola. Air and light and access are also provided by a large 9 1/2' wide door in the south end of the mow.

Tenant House

This structure is very much altered and not in good repair. It is at least as old as the main house and barn.

It is a 1-1/2 story frame construction resting on a fieldstone cellar. The original house is 16' deep and 21-1/2' long (doubled in length by a concrete block addition). It is covered with German siding.

The house is three bays wide facing east and one bay deep. The east facade has a full porch the roof of which used to be incorporated into the main roof (as in a bungalow or "tidewater colonial").

(See Description continuation sheet #2)

In the main room which has been altered it was observed that the studs are mortised into a hewn sill. There are wide random width floorboards and hewn plates. There is an enclosed corner stair in the south west corner. This single downstairs room had two rooms above and kitchen lean-to.

Beneath the house is a full cellar entered by a bulkhead in the south end. It is an unfinished room with rubble walls, dirt floor and exposed puncheons. Most curious is the stone cenical support for the off center interior stove flue. In appearance it is quite like the over hang supports in the barns at HA- and HA- .

HISTORY

Mrs. Leonard Knight aged 75 years lives accross the road from the property. She is the daughter of John B. Bailey and has lived all of her life in the house in which she was born. While her father died when she was but 7 years old she remembers him well and the many things which her mother said of him.

Mr. Bailey was a carpenter, cabinet maker, wheelwright and undertaker in Hopewell Crossroads. There are quite a few visual documents remaining in this neighborhood which attest to his skills. These include not only beautiful pieces of furniture but more than one building exhibiting not only skill but a sense of design as well.

Mrs. Knight recalls her mother saying that before she was born (1905) but after her parents were married (c.1895) her father remodeled Edward Wilkinson's house accross the street. Mrs. Bailey used to tell the story that the house was "opened up" so you could "see straight through it" and the owners were worried as this opening up was in October.

No one knows if Mr. Bailey used pattern designs or not. The Wilkinson design is so typical of the period but so unlike other Harford County houses that one can not help but feel that Bailey was a skilled designer aware of his times. The turret on the north east corner and the similar projection on the west side are well proportioned, ornate and interesting spaces with an almost fantasy like atmosphere.

Bailey's furniture has this same quality being typical of the period in the use of marble tops, Eastlake-like carvings etc. but still having an appearance unlike the run of the mill every day furniture that now fills the antique shops.

According to William Foard who Mrs. Knight says is more of an authority on the community history because she is only 75 while he is 95 remembers John Bailey well. Mr. Foard recalls him working in his shop and that the cabinet maker was an undertaker as well who could supply his own coffins. Mr. Foard states that they were not made ahead of time, but to order.

According to Mrs. Knight her father married twice in his life, lived all of his life in this community, never drank, and died young in his fifties.

*Land records show Ed. Wilkinson acquiring this property via two transactions in 1880 and 1885. See attachment.
